141	142	143	144	145	146	147	148	149	150

This is an Ancient Greek method of finding Prime Numbers.

- Shade number 1 as this is not a Prime Number
- Shade all multiples of 2, but not 2 itself
- Shade all multiples of 3, but not 3 itself
- Shade all multiples of 5, but not 5 itself
- Shade all multiples of 7, but not 7 itself

All unshaded numbers are Prime Numbers. List them below.
